③ Screw Rods ④ Swivel Rod ⑤ Base box ⑥ Wiring terminals
⑦ Screws ⑧ Rubber plugs ⑨ Hexagon screwdriver

Installation steps
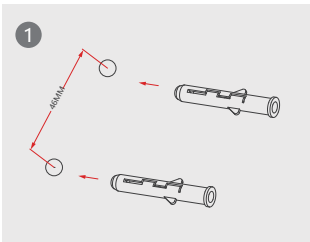

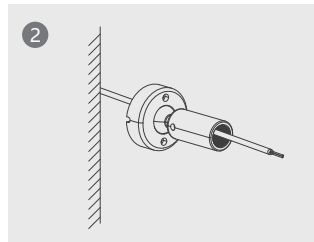

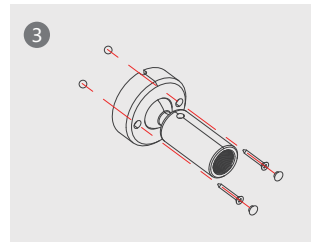

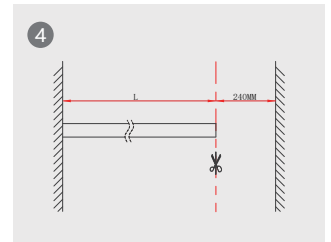

1 Drill 2 holes of 6mm diameter in the installation wall, with a distance of 42mm between the two holes, and install the plastic expansion tube.
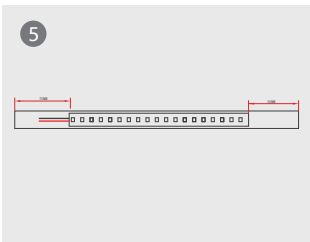

**2** The wire connecting DC24V passes through the bottom box and the swivel rod.

3 Put the screw rod through the base box, fix the base box to the wall, and please fix the rotating rod with wire to the terminal of the bottom box.
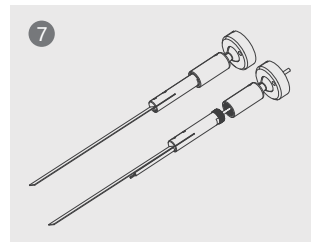

4 Measure the distance of the installation wall, the cut length of the plastic strip (steel strip) should be 240mm shorter than the measured length L.
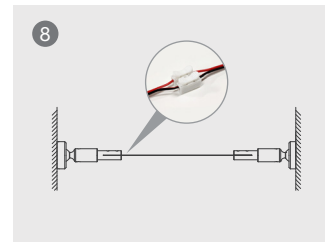

5 Attach the LED strip to the plastic strip (steel strip), leaving 70mm at the beginning and 50mm at the end.
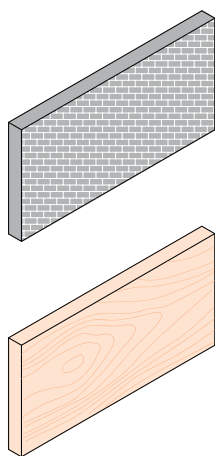

**6** Fix the plastic band (steel band) to the screw rod.

7 First fix the screw rod with the LED strip outlet end, then fix the other end screw rod.
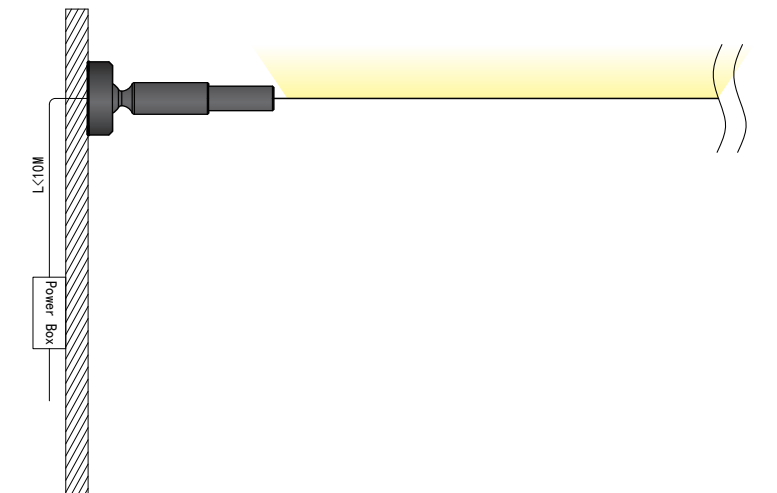

8 Connect both sides of the outgoing wires to the pressed quick terminals.
